

IE Security Risk Assessments

Information security is a challenge in itself. Compliance requirements, budget constraints and reduced staffing compound the complexity and demand placed on organizations to keep data safe. With an IE Security Risk Assessment you get the knowledge you need to successfully navigate information security challenges.

HOW?

Our IE Security experts will assess your environment and make solid recommendations to improve your security posture and reduce your risk.

With the information contained in the IE Risk Report, you have what you need to make better security decisions, focus resources, build budget justifications and potentially save money.

IE Security Risk Assessments

I2E Security Risk Assessment

The Ideas to Execution (I2E) Security Risk Assessment is our most comprehensive security risk assessment and is perfect for those with multiple compliance requirements, no compliance requirements, or those who are simply wanting to be more secure. By focusing on security industry best practices, using standards produced by NIST and SANS, the assessment will provide an understanding of risk posture, the gaps that exist, how to mitigate them and, ultimately, how to reduce risk exposure.

HIPAA Security Readiness Risk Assessment

Healthcare providers are faced with addressing changes in healthcare delivery by leveraging technologies such as telemedicine and the cloud, but each new technology introduces potential security risks. And new and emerging threats, such as ransomware, increase the risk posed to healthcare operations. IE helps bridge the gap between technology and cyber risk while aiding the navigation of regulatory requirements which are constantly changing.

PCI Readiness Risk Assessment

The PCI Security Standards Council sets requirements for organizations processing credit card transactions which continue to evolve in an attempt to address the evolving threat landscape, posing a continuous challenge for IT Security and Compliance. IE recognizes these challenges and with our PCI Security Assessment offers merchants PCI audit readiness, an understanding of the current risk posture, and the opportunity to reduce risk through mitigation controls.

CJIS Security Readiness Risk Assessment

The CJIS Security Policy integrates presidential directives, federal laws, FBI directives, and the criminal justice community's Advisory Policy Board (APB) decisions along with nationally recognized guidance from NIST and the Compact Council. The IE CJIS Readiness Security Assessment helps improve your security posture while preparing your organization for the triennial audit, saving time and resources.
